

Day 1 : 03/01/2022,Monday

Topic: Create your salesforce developer org to get started

Milestone / Activities: Creating Developer Account

Account activation

Login to your salesforce Account

Detailed Description: First I sign up the developers.salesforce.com/ with all required information ,after clicking the sign up button I will get an email for activating the developer account ,then I verify the account ,then after I login the salesforce account.

Upload the Screenshot the Milestone / Activities :

Salesforce Home Page Overview

The screenshot shows the Salesforce Home page with the following components:

- Header:** Shows tabs for "Welcome to SmartInternz! Delightful", "Student Dashboard", "SmartBridge", "Hands-On Orgs", and "Home | Salesforce". Below the tabs are links for "Apps", "Gmail", "YouTube", "Maps", "Logout", "Online Certificate V...", and "New Tab".
- Search Bar:** A search bar with the placeholder "Search..." and a dropdown menu showing "All".
- Profile and Icons:** A user profile icon and various system icons for navigation.
- Quarterly Performance:** A chart titled "Quarterly Performance" comparing "Closed" (orange line), "Goal" (green line), and "Closed + Open (>70%)" (blue line) over the months of Oct, Nov, and Dec. The Y-axis ranges from 0M to 5M. The chart shows a steady increase in all metrics, with the blue line reaching approximately 4.5M by December.
- Assistant:** A section titled "Assistant" featuring a cartoon illustration of a landscape with mountains, clouds, and a small figure. A message says, "Nothing needs your attention right now. Check back later."
- Today's Events:** A section showing a calendar view with a blue sun icon and a list of events.
- Today's Tasks:** A section showing a list of tasks with a blue icon.
- System Status:** A status bar at the bottom showing "ENG IN", signal strength, battery level, and the date/time "18:18 08-01-2022".

Day 2 : 04/01/2022,Tuesday

Topic: Custom Object Creation

Milestone / Activities:Create the custom objects for the application

Create fields on college object

Create fields on application form object

Create fields on student object

Create fields on subject object

Detailed Description: First I have created the custom objects then after I created all the fields in College,Application form,Student and Subject objects according to the project details

Upload the Screenshot the Milestone / Activities :

The screenshot shows the Salesforce Object Manager interface. The top navigation bar includes tabs for 'Setup', 'Home', and 'Object Manager'. The main title is 'College'. On the left, a sidebar lists various configuration options under 'Fields & Relationships'. The main content area displays a table titled 'Fields & Relationships' with 11 items, sorted by Field Label. The columns are: FIELD LABEL, FIELD NAME, DATA TYPE, CONTROLLING FIELD, and INDEXED. The data in the table is as follows:

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Capacity Students	Capacity_Students__c	Picklist		
College Fees	College_Fees__c	Currency(7, 2)		
College ID	College_ID__c	Auto Number

ENG IN 21:45 08-01-2022

Day 4 :06/01/2022, Thursday

Topic: Process Builder

Milestone / Activities:Process Automation

Detailed Description:I have created builder named Application Form Process master setup>quick find box>process builder>new,created as per information given in project details

Upload the Screenshot the Milestone / Activities :

Day 5 :07/01/2022 , Friday

Topic: Flows

Milestone / Activities: Create the student record using flow

Detailed Description: I have created the application form record trigger flow , in that I have created a variable named student in the resource section and I add the some assignments and then created the student record.

Upload the Screenshot the Milestone / Activities :

Day 6 :10/01/2022,Monday

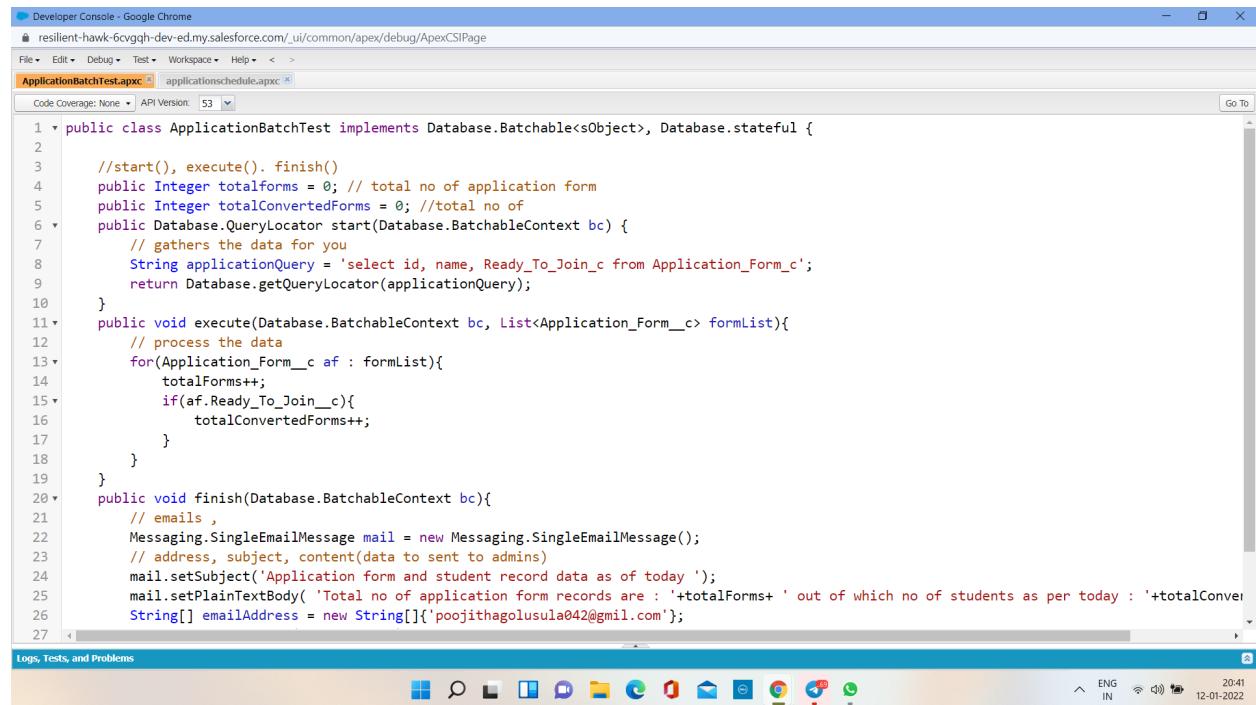

Topic: Batch Apex

Milestone / Activities:Create a Batch apex for Application form

Create a Schedular class

Detailed Description: First I have created the batch apex for application form in developer console then I have created another class named application schedule, then after I schedule the apex setup>apex classes>schedule apex,then I excute the code after that I received an email.

Upload the Screenshot the Milestone / Activities :

The screenshot shows the Salesforce Developer Console interface. The title bar reads "Developer Console - Google Chrome" and the URL is "resilient-hawk-6cvqgh-dev-ed.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage". The menu bar includes "File", "Edit", "Debug", "Test", "Workspace", "Help", and "Go To". The tabs at the top are "ApplicationBatchTest.apxc" (selected) and "applicationschedule.apxc". Below the tabs, there are dropdowns for "Code Coverage: None" and "API Version: 53". The main area contains the Apex code for the ApplicationBatchTest class:

```
1 public class ApplicationBatchTest implements Database.Batchable<sObject>, Database.stateful {
2
3     //start(), execute(). finish()
4     public Integer totalForms = 0; // total no of application form
5     public Integer totalConvertedForms = 0; //total no of
6     public Database.QueryLocator start(Database.BatchableContext bc) {
7         // gathers the data for you
8         String applicationQuery = 'select id, name, Ready_To_Join_c from Application_Form_c';
9         return Database.getQueryLocator(applicationQuery);
10    }
11    public void execute(Database.BatchableContext bc, List<Application_Form_c> formList){
12        // process the data
13        for(Application_Form_c af : formList){
14            totalForms++;
15            if(af.Ready_To_Join_c){
16                totalConvertedForms++;
17            }
18        }
19    }
20    public void finish(Database.BatchableContext bc){
21        // emails ,
22        Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMessage();
23        // address, subject, content(data to sent to admins)
24        mail.setSubject('Application form and student record data as of today ');
25        mail.setPlainTextBody( 'Total no of application form records are : '+totalForms+ ' out of which no of students as per today : '+totalConvertedForms );
26        String[] emailAddress = new String[]{'poojithagolusula042@gmail.com'};
27    }
}
```

The code implements a batchable class with methods for start, execute, and finish. It counts application forms and students, sends an email with the count, and sets the subject and plain text body of the email. The code is written in Apex, a programming language used for building custom applications on the Salesforce platform.

Developer Console - Google Chrome

ENG IN 19:15 16-01-2022

Day 10 : 17/01/2022,Monday

Topic: Lightning Web Components

Milestone / Activities: Create College dataTable Component(APEX CLASS)

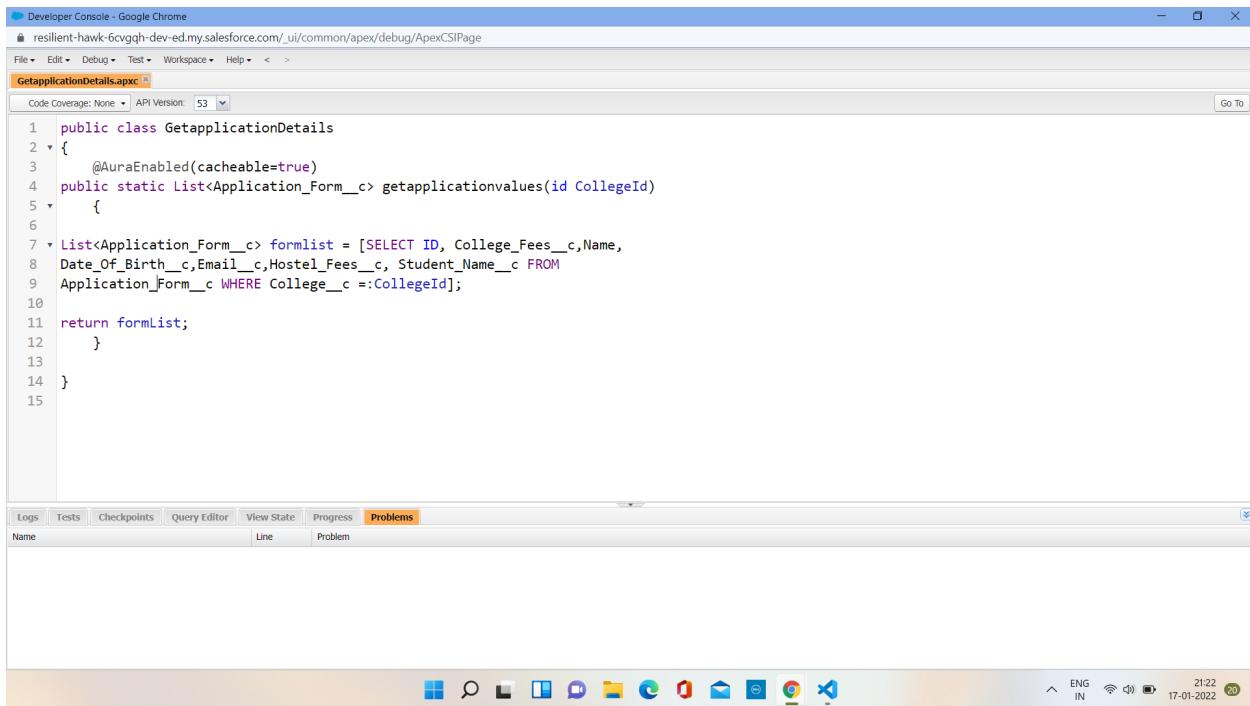

Create College dataTable Component(HTML FILE)

Create College dataTable Component(JAVA SCRIPT FILE)

Create College dataTable Component(META FILE)

Detailed Description: First I have created the apex class named GetApplicationDetails in developer console,then I download and instal the vscode and created the htmlfile,javascript file,meta file.

Upload the Screenshot the Milestone / Activities :

The screenshot shows the Salesforce Developer Console interface. The title bar says "Developer Console - Google Chrome". The address bar shows the URL "resilient-hawk-6cvqgh-dev-ed.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage". The menu bar includes "File", "Edit", "Debug", "Test", "Workspace", "Help", and "Go To". The main area displays the code for the "GetapplicationDetails.apxc" class:

```
1  public class GetapplicationDetails
2  {
3      @AuraEnabled(cacheable=true)
4      public static List<Application_Form__c> getapplicationvalues(id CollegeId)
5      {
6
7          List<Application_Form__c> formlist = [SELECT ID, College_Fees__c,Name,
8          Date_of_Birth__c,Email__c,Hostel_Fees__c, Student_Name__c FROM
9          Application_Form__c WHERE College__c =:CollegeId];
10
11         return formList;
12     }
13
14 }
15
```

Below the code editor, there is a toolbar with tabs: "Logs", "Tests", "Checkpoints", "Query Editor", "View State", "Progress", and "problems". The "problems" tab is selected. At the bottom of the screen, there is a taskbar with various icons and system status indicators.

The screenshot shows the Visual Studio Code interface with the following details:

- File Bar:** File, Edit, Selection, View, Go, Run, Terminal, Help.
- Title Bar:** HTML file - Visual Studio Code.
- Left Sidebar:** Includes icons for Find, Search, Open, Save, Undo, Redo, and a status bar showing "Ln 15, Col 12".
- Central Area:** A code editor window titled "HTML file" containing the following code:

```
C: > Users > DELL > <!-- HTML file -->
1   <template if:true={recordList}>
2     <lightning-dataTable
3       key-field="id"
4       data={recordList}
5       show-row-number-column
6       hide-checkbox-column
7       columns={columnsList}
8     >
9   </lightning-dataTable>
10  </template>
11
12  <template if:true={error}>
13    | {error}
14  </template>
15 </template>
```
- Bottom Status Bar:** Shows "Spaces: 4", "UTF-8", "CRLF", "HTML", and a file icon.
- Bottom Icons:** Standard Windows taskbar icons for File Explorer, Task View, Start, Taskbar settings, and a search icon.
- Bottom Right:** Language bar showing "ENG IN", signal strength, battery level, and the date/time "17-01-2022 21:32".

The screenshot shows a Visual Studio Code interface with the following details:

- File Bar:** File, Edit, Selection, View, Go, Run, Terminal, Help.
- Tab Bar:** Get Started, HTML file, JavaScript file.txt 2 (highlighted in red), META file.xml.
- Code Editor:** The main area contains a JavaScript file named "JavaScript file.txt". The code imports "LightningElement", "api", and "wire" from "lwc", and "getapplicationvalues" from "@salesforce/apex/GetapplicationDetails.getapplicationvalues". It defines a class "collegeDatatable" extending "lightningElement". The class has a "columnsList" array containing 11 items, each representing a field with its label, field name, type, and possibly a currency symbol. It includes methods for "recordId", "recordList", and "error". It also includes a "wiredCollegeData" method that takes "data" and "error" as parameters. This method checks if "data" is present; if so, it sets "recordList" to "data"; if not, it sets "error" to "error" and "recordList" to undefined. The code ends with a closing brace for the class definition.
- Bottom Status Bar:** Ln 30, Col 1 | Spaces: 4 | UTF-8 | CRLF | JavaScript | 21:32 | ENG IN | 17-01-2022 | 20
- Bottom Icons:** Standard Windows taskbar icons for File, Search, Task View, File Explorer, File Manager, Taskbar, Mail, Photos, and Google Chrome.

A screenshot of the Visual Studio Code interface. The title bar reads "META file.xml - Visual Studio Code". The left sidebar shows icons for Get Started, HTML file, JavaScript file.txt 2, and META file.xml. The main editor area contains the following XML code:

```
C:\> Users > DELL > META file.xml
1  <xml version="1.0">
2  <LightningComponentBundle
3  xmlns="http://soap.sforce.com/2006/04/metadata">
4  <apiVersion>51.0</apiVersion>
5  <isExposed>true</isExposed>
6  <targets>
7  | <target>lightning__RecordPage</target>
8  | <target>lightning__AppPage</target>
9  | <target>lightning__HomePage</target>
10 </targets>
11 </LightningComponentBundle>
```

The status bar at the bottom shows "Ln 11, Col 28" and "Spaces: 4" and "UTF-8" and "CRLF" and "XML". On the far right of the status bar, there are icons for ENG, IN, battery level (20%), and the date/time "17-01-2022 21:32".
